Compliance & Approvals for Indian Market

If you are a manufacturer or exporter in Japan and want to sell electronic or IT products in India, you may need **BIS CRS Registration in Japan** before your products can be imported and sold in the Indian market. The Bureau of Indian Standards (BIS) requires many electronic and IT products to be registered under the Compulsory Registration Scheme (CRS) to ensure they meet Indian safety and quality standards.

Obtaining BIS CRS Registration in Japan helps businesses comply with Indian regulations and legally export their products to India. Since the registration process involves documentation, product testing, and application filing, many manufacturers choose a BIS CRS Registration Consultant for Japan to complete it smoothly and efficiently.

What is BIS CRS Registration in Japan?

BIS CRS Registration in Japan is a mandatory approval for Japanese manufacturers exporting notified electronic and IT products to India. It is issued by the **Bureau of Indian Standards (BIS)** under the **Compulsory Registration Scheme (CRS).**

Registration is required for electronic and IT products covered by the applicable BIS CRS product list in India. It ensures that these products comply with the applicable Indian Standards and meet the required safety requirements before they can be imported, sold, or distributed in the Indian market.

Some products that commonly require BIS CRS Registration in Japan include:

- Mobile phones
- Laptops
- Tablets
- LED lights
- Power adapters
- Wireless speakers
- Other notified electronic and IT products

The **Bureau of Indian Standards (BIS)**, India's national authority for product quality and safety, grants BIS CRS Registration to eligible manufacturers. Obtaining BIS CRS Registration in Japan helps manufacturers comply with Indian regulations and legally export their products to the Indian market.

Process for BIS CRS Registration in Japan

Japanese manufacturers exporting notified electronic and IT products to India generally follow these steps to obtain BIS CRS Registration in Japan.

Step 1: Prepare the Required Documents
The applicant should prepare all the required documents according to the prescribed BIS checklist. Foreign manufacturers must appoint an **Authorized Indian Representative (AIR)** before submitting the application.

Step 2: Product Testing
The lead model of the product should be tested in a **BIS-recognized laboratory** according to the applicable Indian Standard. The laboratory issues the product test report required for the registration process.

Step 3: Submit the Application

The applicant should submit the BIS application along with the required documents, product test report, and applicable fees to the **Bureau of Indian Standards (BIS)** to initiate the registration process.

Step 4: Grant of BIS CRS Registration

After verifying the application, supporting documents, and product test report, the **Bureau of Indian Standards (BIS)** grants the **BIS CRS Registration**, allowing the manufacturer to export and sell the approved product in the Indian market.

Why choose Brand Liaison?

Brand Liaison is a trusted compliance consulting company providing complete support for BIS CRS Registration in Japan. We help Japanese manufacturers and exporters understand BIS requirements and complete the registration process quickly, smoothly, and efficiently.

Our Services

- Product eligibility assessment
